

A large iceberg floating in the ocean. The tip of the iceberg is visible above the water surface, while the much larger, jagged base is submerged underwater. The sky is a clear, bright blue, and the water is a deep, dark blue. The overall scene is a metaphor for hidden information or data.

SMARTICS MONITORING, ANALYSIS AND REPORTING TOOL FOR INVOICE CONTROL

Today's operators are spending considerable time and resources for verifying accuracy of customer's invoice, revising the errors and corrections. This operation requires detailed technical knowledge, smart controls and correction and compliance management; else operators are faced with significant revenue leakages.

i2i now delivers an invoice control tool, SMARTICS, to help telecom operators detect and diagnose potential incorrect data along the charging and billing domains.

SMARTICS collects referential data, customers' account data and call data from a variety of business and operation systems (B/OSS) via its scalable and flexible data extraction templates.

SMARTICS then re-rates and re-bills selected customers by making use of its award winning charging and billing engine, FCBS, in order to verify whether customers are being charged accurately by the relevant billing system.

Key Benefits

SMARTICS is a exclusive invoice control tool with a unique approach offering tangible benefits;

- **Ease to integrate and maintain:** easily configured to handle different B/OSS systems with the help of its modular structure and flexible interfaces.
- **Built for rapid deployment:** due to its modular approach and architecture, it can be rapidly deployed.
- **Simple "Reference Data" configuration:** charging rates, free unit definitions, tax definitions, discounts, commitments and penalties are easily transformed by structured SMARTICS sheets.
- **Easy reporting and reconciliation:** dashboard approach, drill-down analysis, GUI interfaces to compare the output with the existing data are supported.
- **Quick time to market & complex offerings:** supports fully rule-driven tariffs, cross product discounts, complex split-billing rules.

■ **Performance and scalability:** collect and process customer data ensuring maximum performance, proven high throughput.

■ **Proven solution:** SMARTICS has been selected and successfully deployed to several telecom operators.
